UHP Projects Incorporated is a Virginia based company who provides services in surface preparation and coating installation. We bought 2-Hedon soluble meters (Model RPCT-07-001) over 5-years ago. I cannot tell you how great and how much time and money they have saved us. We conduct QA measurements for soluble salts on Aircraft Carriers, LHD's, Destroyers, and USNS Ships, which all have large and small amounts of square footage to conduct testing on. The meters paid for themselves after the first carrier set of measurements. No more Bresle patches to buy, no more needles, no more having to clean and scrap the patch and glue off the decks. The greatest thing is there are no consumables required with this meter. No Bresle patches, no condemnns, no expensive test strips. It just takes a few simple steps and you have your reading in approximately 50-seconds. Depending on the amount of square footage we can do many readings a day. That's a lot of money saved not using Bresle patches.

Sharon A. Clayton

A handwritten signature in black ink, appearing to read 'Sharon A. Clayton', with a long, sweeping underline that extends to the right.
